RE: IT TRAINEE(SUMMER 2023) - 35801

Dear Hiring Manager,

I am writing to express my strong interest in the IT TRAINEE(SUMMER 2023) position at City of Toronto job opportunities. With my extensive experience in administration of Linux and Unix Operating Systems, and my ability to adapt quickly to new environments, I am confident that I can make a valuable contribution to your team.

During my time at H2O System Technology Co., Ltd, I had the opportunity to establish a Commodity Trading HTS platform for small business owners using C, JavaScript, and MySQL. This project required me to work in a distributed environment, and to develop a UI/UX display in a Windows environment. I was also responsible for formulating complex queries to work with massive databases. My work on this project was highly valued, and I was recommended for further dispatch assignments.

During my dispatch period at Yuanta Securities Co., Ltd, I was responsible for upgrading the Java version, which required me to install a new Java package to an actual operating system. This project allowed me to gain valuable experience in problem-solving and debugging, and I was able to successfully resolve any issues that arose.

In my dispatch role at Shinyoung Securities Co., Ltd, I was responsible for maintaining and managing the company's operating servers. This required a high level of understanding of Linux and mainly used C language. I had to deal with Linux bash/shell scripting, Socket Programming, and Multithreading programming. Additionally, I gained a high level of understanding of the security process that was essential when a client connected.

At Yuanta Securities, I documented all the various information necessary for the project while working on the Java version upgrade project. I was also responsible for the middleware system analysis design, diagrams, and detailed explanations, which were all documented.

At Shinyoung Securities, I have excellent communication skills and a strong time concept, which I gained from making important server settings according to the stock trading time. Additionally, I worked closely with the load balancing department along with the interface department, which is the client side. I am confident that these skills will enable me to work effectively with your team and contribute to the success of your organization.

Thank you for considering my application. I look forward to hearing from you soon.

Sincerely,

Junbeom Lim
